

Medical Accommodations Card

not every disability
is visible

For more information, please visit: www.csfleak.info

Thank you.

It would be greatly appreciated if you
would accommodate the medical
need for this person to sit or lie down.

This person suffers from an invisible disability called a CSF leak. The fluid surrounding, cushioning and protecting the brain and spinal cord leaks out. This can cause low fluid volume or pressure within the skull, and may result in severe head pain, visual disturbance, dizziness, nausea, shortness of breath and cognitive impairment, all of which worsen progressively the longer they are sitting or standing.

Cerebrospinal Fluid (CSF) Leak
